

BETA BUILD REVIEW

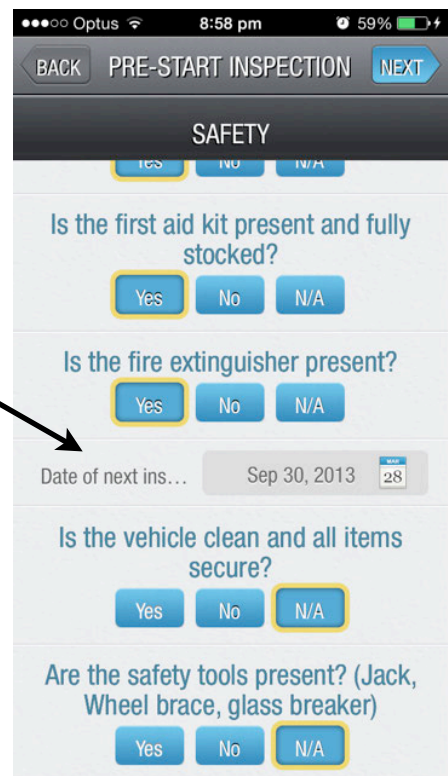

SAFE START APP

Reviewed by:

Clique Consultants

Thank you to the OCSICO development team for the work you have come up with so far. The notes below are my comments on the beta build releases for the Safe Start app.

1. On this screen, the entire sentence "Date of next inspection" must be displayed to avoid confusion.

Optus 8:58 pm 59%

BACK PRE-START INSPECTION NEXT

SAFETY

Is the first aid kit present and fully stocked?

Yes No N/A

Is the fire extinguisher present?

Yes No N/A

Date of next ins... Sep 30, 2013 28

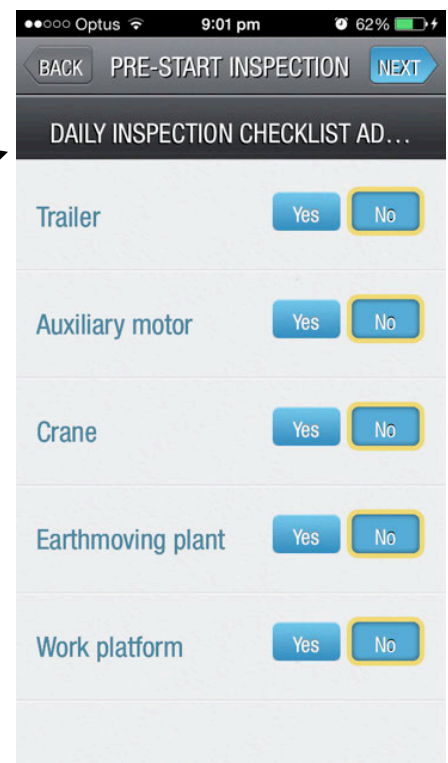

Is the vehicle clean and all items secure?

Yes No N/A

Are the safety tools present? (Jack, Wheel brace, glass breaker)

Yes No N/A

2. Please change "Daily Inspection Checklist Additional" to "Additional Checklists". Also please include the text "Are you required to perform additional inspections?" underneath this black titlebar, but before the Trailer item.

Optus 9:01 pm 62%

BACK PRE-START INSPECTION NEXT

DAILY INSPECTION CHECKLIST AD...

Trailer Yes No

Auxiliary motor Yes No

Crane Yes No

Earthmoving plant Yes No

Work platform Yes No

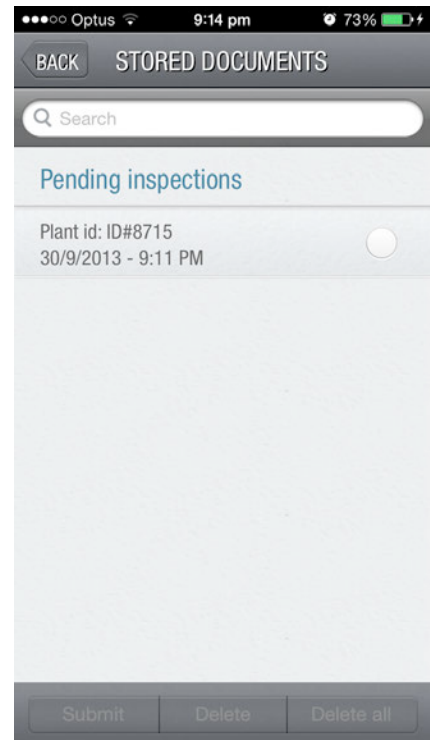

3. Please double check this question, it is not correct. It seems two questions have been fused together. Please check the documentation for correct question.

4. This is just for your information. This screen showed when I tried to submit an inspection using the email system. I had selected all additional checklists and used a different ID for the Trailer.

5. The submission worked when using the Database system.

Regarding the “Confirm” button, please add more space around the text as it looks too squashed right now. It should have the same amount of space either side of the text as the “Back” button does.

6. The “id” in “Plant id” must be capitalised. E.g “Plant ID”

7. Please ensure the title PRE-START INSPECTION is not truncated. You can reduce font size if necessary.

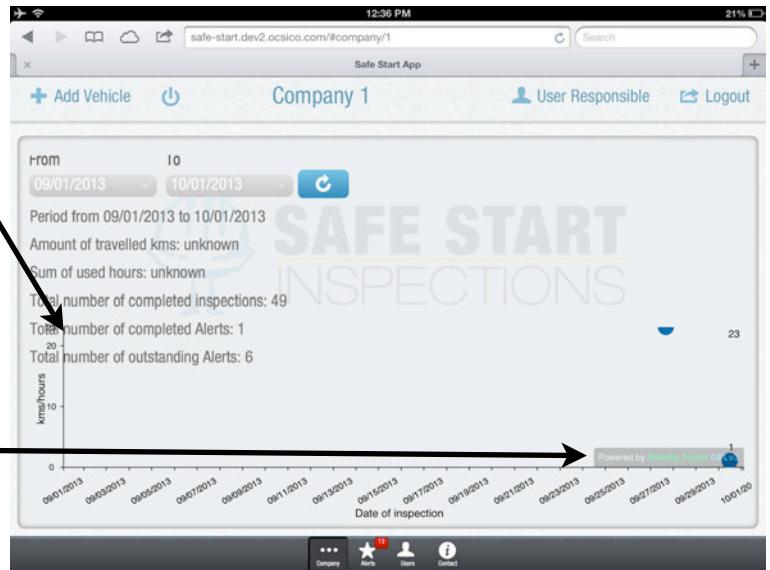

8. TABLET: Please reduce the row width of the lists to match the width of the button section.

Also, the last items on every checklist seem to fade off halfway.

9. TABLET: Layout of reporting graph is not showing properly.

Also, is the "Powered by Sencha Touch" necessary? Is there a way to remove it?

10. TABLET: Bug info: could not select "Manager" in landscape view when using tablet. It was off the top of the screen.

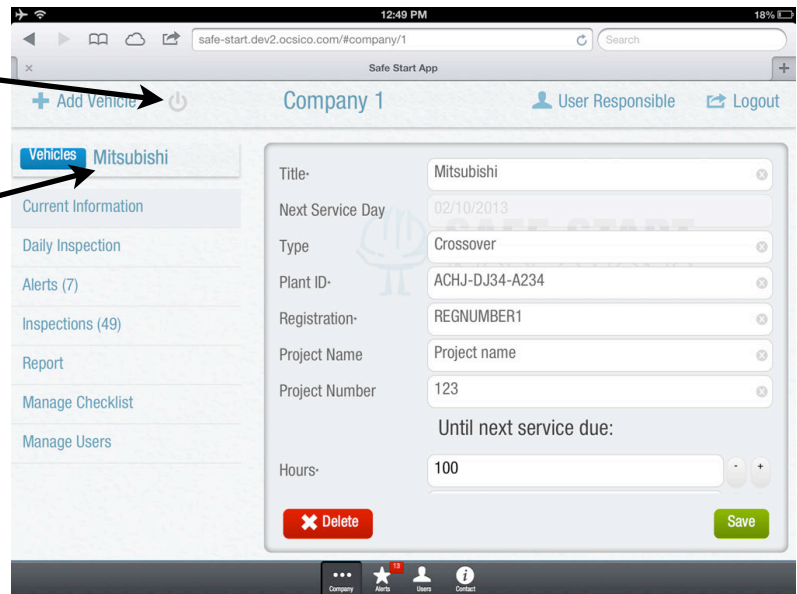

11. TABLET: Please move the labels closer to the radio buttons, they are too far right.

12. TABLET: Vehicle Info page should not hide the sidebar by default.

Vehicle name should be displayed as <PLANT ID> <VEHICLE NAME> as per FR_018 in specification documents.

Change the following headings:

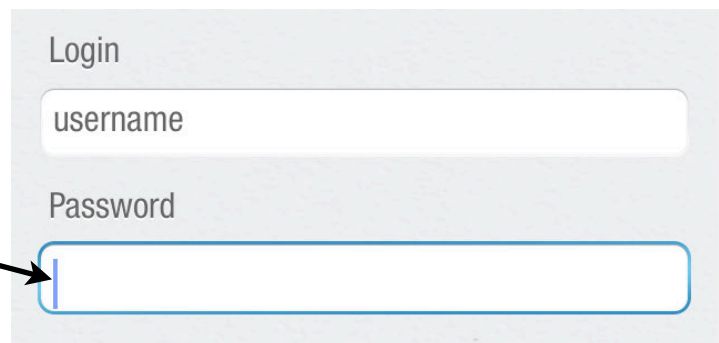

- Daily Inspection -> Perform An Inspection
- Inspections (XX) -> Previous Inspections (XX)
- Report -> Reporting
- Manage Checklist -> Manage Checklists

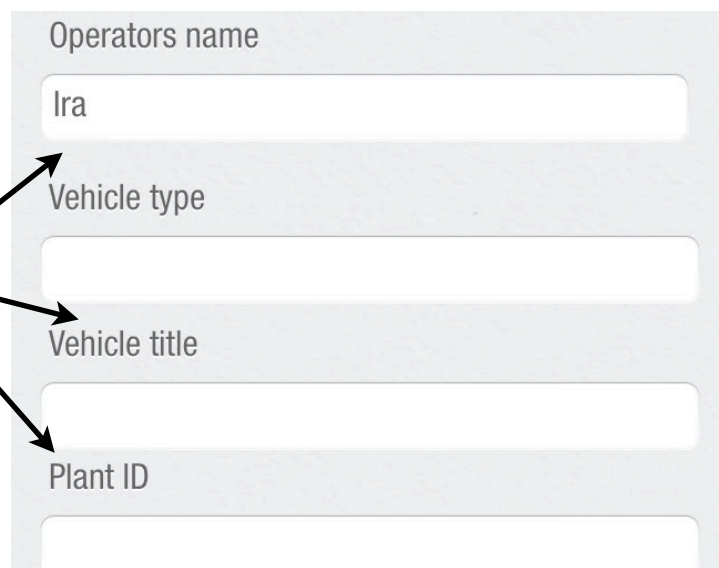

13. There are quite a few small adjustments that we would like made to things like line alignment, spacing, etc. We understand that this is still a beta version but we want to let you know our thoughts know so that you can deliver a “polished”, professional product that meets our expectations with the final release.

Below are some examples of the issues we would like addressed:

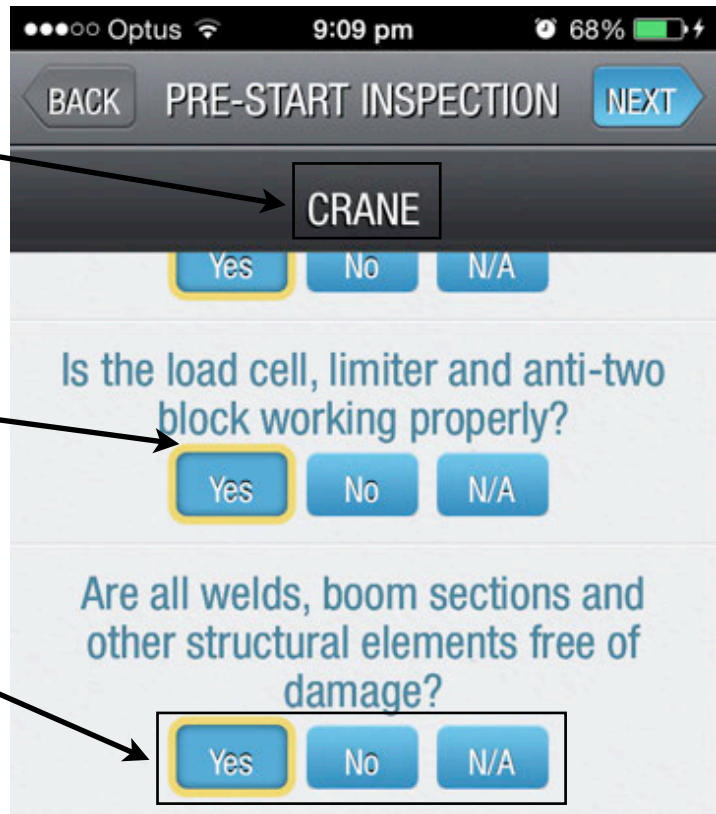

- Line height of typing cursors should be aligned to the middle of the text box, not to the bottom.

- Inconsistent spacing between labels and text boxes in FR_006

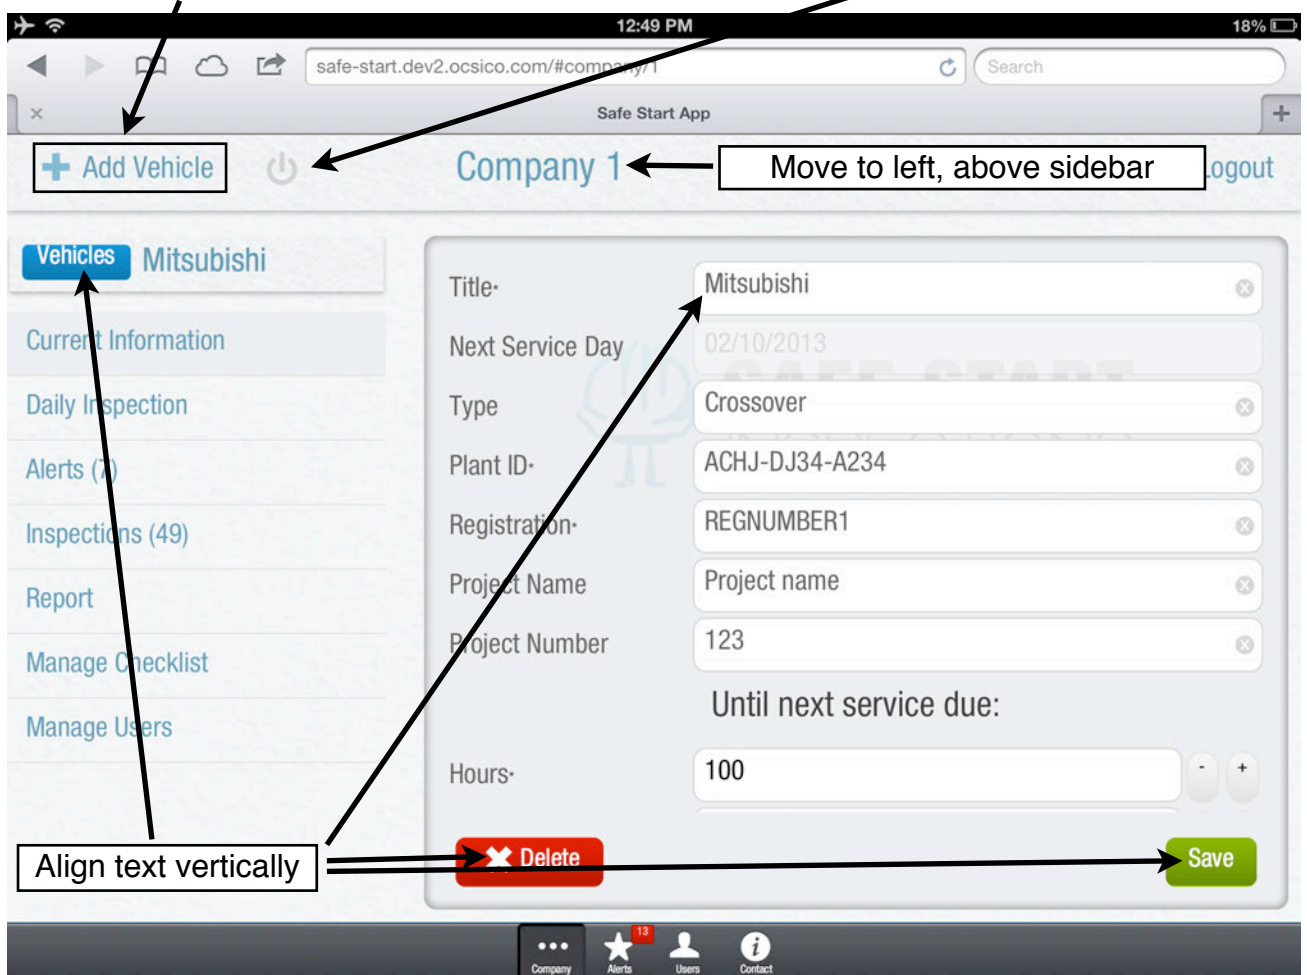

- Text in all sections should be aligned properly. In this case, the text in this header section is not vertically-centred. (This goes for all titles displayed in this sub-header.)
- Is it possible to add some empty space (just a few pixels) between the end of the questions and the buttons (for all checklists)? We feel it is a little too cramped and does not look "polished".
- Another example of text not vertically-aligned properly can be seen in the buttons. The "Yes, No, N/A" text are a few pixels too close to the bottom of the button. Please centre text EXACTLY in the middle.

Move this button to sidebar
(under Vehicles)

Can you change this icon to something that more accurately represents a sidebar, and move all the way to left?

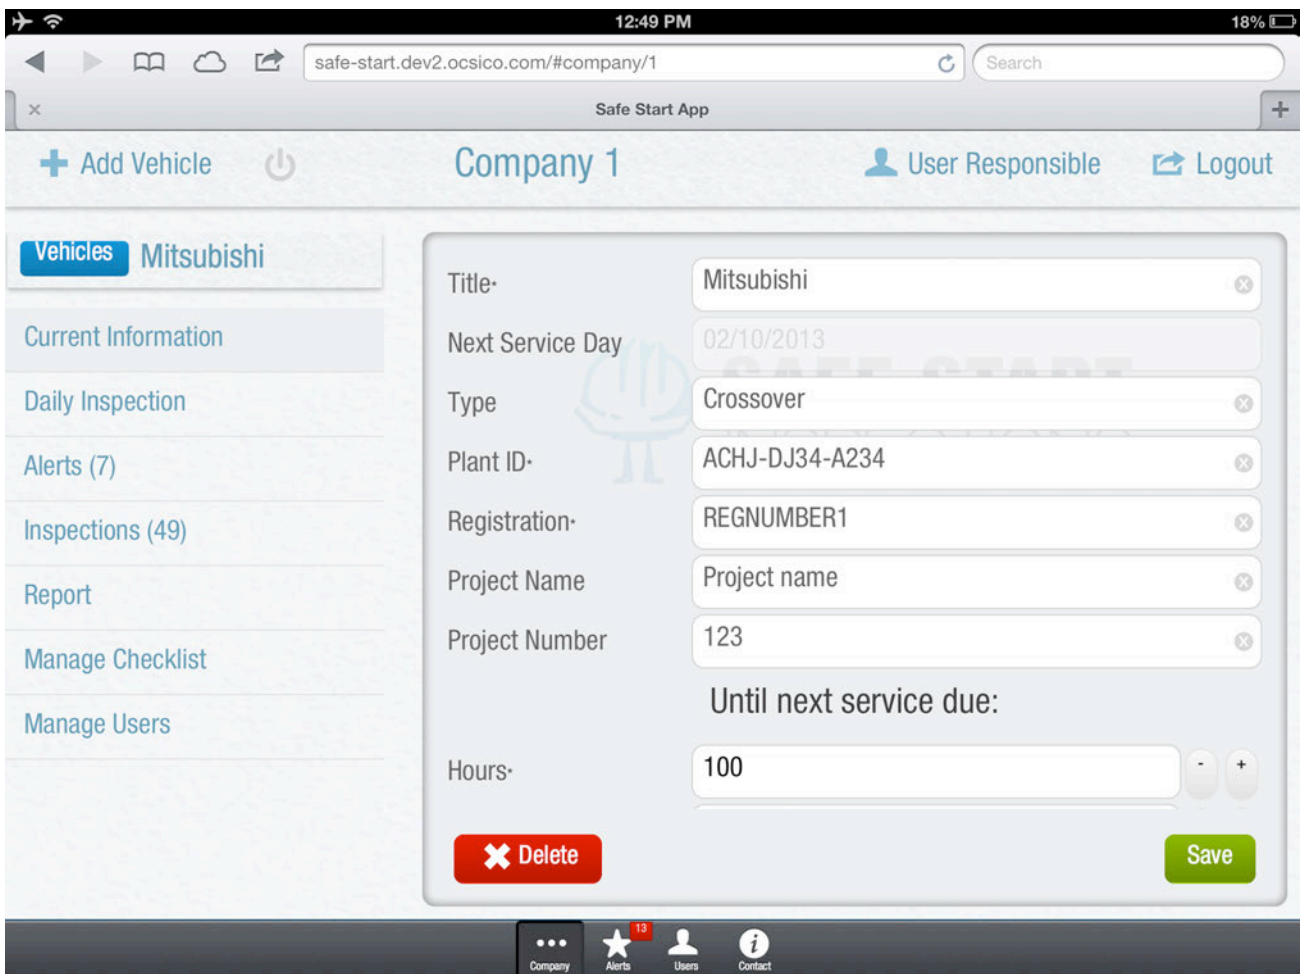

14. WEB UI Changes.

We are happy with the current layout, but want to change some elements of the Web UI.

Please change the grey and textured backgrounds of the Web database to white, with clean lines. A good example we like is the demo Kitchen Sink found on sencha's website: <http://cdn.sencha.com/touch/sencha-touch-2.2.1/built-examples/kitchensink/index.html>

Please also remove the Safe Start watermark logo on the background of the Web UI.

The screenshot shows a web application interface for 'Company 1'. The top navigation bar includes 'Add Vehicle', 'Company 1', 'User Responsible', and 'Logout'. A sidebar on the left lists various options: 'Vehicles', 'Mitsubishi', 'Current Information', 'Daily Inspection', 'Alerts (7)', 'Inspections (49)', 'Report', 'Manage Checklist', and 'Manage Users'. The main content area displays a form for a vehicle titled 'Mitsubishi'. The form fields include: 'Title' (Mitsubishi), 'Next Service Day' (02/10/2013), 'Type' (Crossover), 'Plant ID' (ACHJ-DJ34-A234), 'Registration' (REGNUMBER1), 'Project Name' (Project name), 'Project Number' (123), and 'Hours' (100). A 'Delete' button is located at the bottom left of the form, and a 'Save' button is at the bottom right. The bottom of the screen features a dark navigation bar with icons for 'Company', 'Alerts', 'Users', and 'Contact'.

If there are any queries about anything in this review or if you require any clarification, please contact me at ira@cliqueconsultants.com or on Skype: iranata.warner.

We look forward to the final product!

Best Regards,
Ira Warner
